## Special issue on Transportation Systems Analysis

Guest editors:

- **Michel Bierlaire**, Ecole Polytechnique Fédérale de Lausanne, Switzerland
- **Carolina Osorio**, Ecole Polytechnique Fédérale de Lausanne, Switzerland

Since 1991, the Triennial Symposium on Transportation Analysis (TRISTAN) has become one of the main gathering points of top researchers from academia and industry in all areas of transportation science. TRISTAN VII took place in Tromsø, Norway, from June 20 to 25, 2010, and continued this tradition of excellence and friendly scientific exchanges. In connection with the activities of this conference, we are very glad to announce a special issue of **Transportation Research Part C** entitled *Special issue on Transportation Systems Analysis*. We seek submissions from participants to TRISTAN VII, but the special issue is open to the entire international research community. Contributions covering all topics in transportation modeling and analysis, including operations research models and algorithms, dynamic traffic assignment, traffic flow theory, demand models, are welcome. All contributions will be peer reviewed according to the usual standards of the journal.

The papers must be submitted on the **Electronic Editorial System of the journal** by **November 30, 2010**.

*To ensure that all manuscripts are correctly identified for inclusion into the special issue, it is important that authors select **SI: TRISTAN VII** when they reach the "Article Type" step in the submission process.*

Best regards,

Michel Bierlaire and Carolina Osorio.
