

Dear Colleague,

We would like to draw your attention to the fourth edition of EvoTransLog, Evolutionary Computation in Transportation and Logistics.

EvoTransLog 2010 is incorporated in Evo\* 2010, which joins Europe's premier co-located conferences in the field of Evolutionary Computing, namely EuroGP, EvoCOP, EvoBIO, and the EvoApplications Conference on the Application of Evolutionary Computation.

It will be held in Istanbul, Turkey, 7-9 April 2010.

Submission deadline is November 4, 2009.

EvoTransLog addresses all aspects of the use of evolutionary computation, local search, and other nature-inspired optimisation and design techniques for transport, logistics, and supply chain management.

Relevant application topics include (but are not limited to):

- transportation and supply networks
- logistics
- freight and passenger services
- tracking and tracing
- fleet and order management
- modelling and traffic management
- traffic simulation
- individual and public transportation
- inventory optimisation
- routing and scheduling
- supply chain management

Accepted papers will be published in a volume of the Springer Lecture Notes in Computer Science series together with papers from the EvoApplications Conference on the Application of Evolutionary Computation.

For more information, visit <http://www.evostar.org> and <http://dces.essex.ac.uk/research/evostar/EvoTRANSLOG.htm> .

Best regards,

Andreas Fink and Jörn Grahl  
(program chairs)
